INDICATOR DASHBOARD · DIGITAL FINANCE · SUB-SAHARAN AFRICA

Ethiopians open accounts. They rarely use them digitally.

Nine indicators of access and digital use for 35 countries, from the World Bank's 2025 Global Findex survey. Ethiopia is below the regional figure on account ownership, and near the bottom on almost every measure of digital use.

Analysis and design: Dawit Sileshi

Data: Global Findex 2025 microdata (fielded 2024) · about 1,000 adults per country, weighted

58%

of Ethiopian account holders made or received no digital payment in a year. Highest of 35 countries.

13%

is the same figure for Sub-Saharan Africa as a whole, weighted by adult population.

9.5%

of Ethiopian adults have a mobile money account. Only Niger is lower among the 34 countries asked.

Ethiopia scorecard

Ethiopia against the regional figure. Rank is out of the countries measured, 1 = best.

● Ethiopia | Sub-Saharan Africa

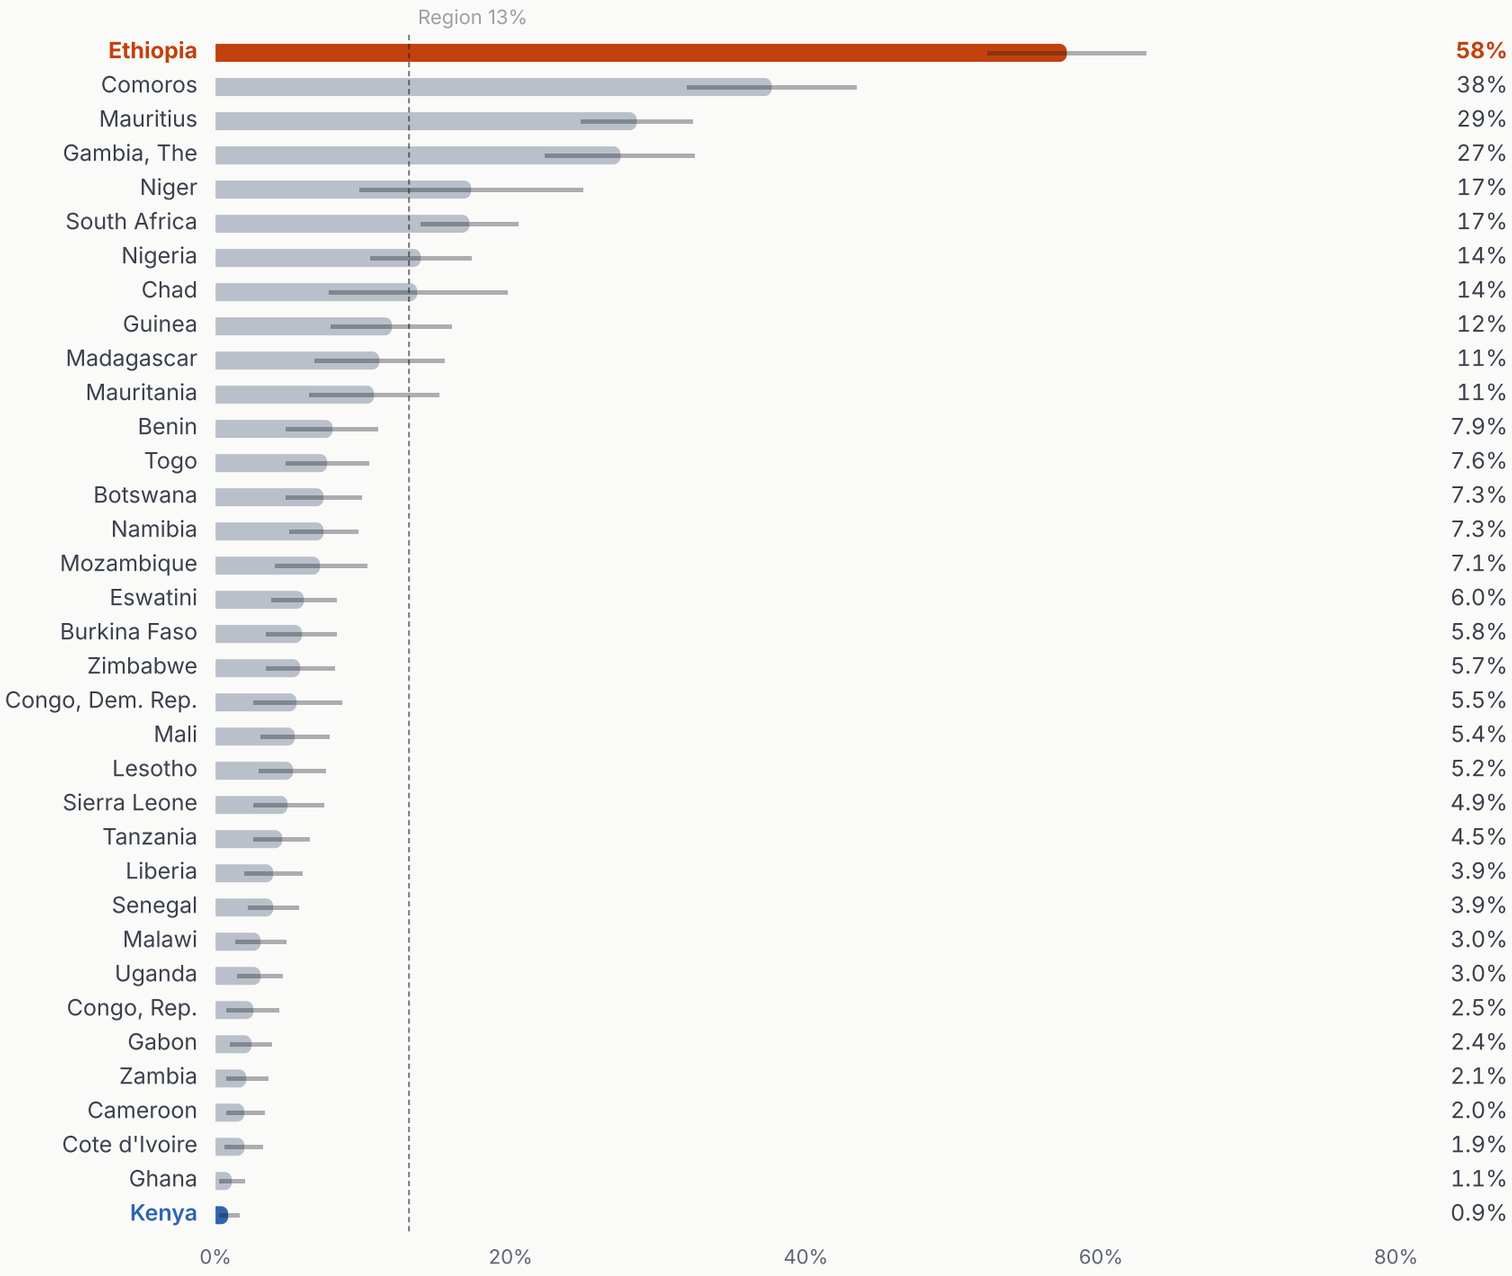

INDICATOR	ETHIOPIA	REGION	RANK	0 – 100%
Account but no digital payment Lower is better	57.7%	13.1%	35 / 35	
Has an account Higher is better	48.8%	58.2%	26 / 35	
Has a mobile money account Higher is better	9.5%	40.2%	33 / 34	
Made or received a digital payment Higher is better	20.7%	50.6%	33 / 35	
Paid a merchant digitally Higher is better	5.9%	19.5%	29 / 35	
Owns a mobile phone Higher is better	58.1%	74.7%	31 / 35	
Owns a smartphone Higher is better	16.3%	33.0%	31 / 35	
Used the internet Higher is better	13.8%	36.3%	33 / 35	
Owns a phone, no account Lower is better	19.8%	21.5%	11 / 35

Ethiopia Kenya Other countries Sub-Saharan Africa

Account but no digital payment. Has an account but made or received no digital payment in the past 12 months. Ethiopia: **57.7%**, rank 35 of 35. Kenya: 0.9%. Region: 13.1%.

Indicator dictionary

How each figure is built. Variable names are from the Findex 2025 microdata file. All shares use the survey weight.

INDICATOR	DEFINITION	RULE	BASE	BETTER IS
Account but no digital payment	Has an account but made or received no digital payment in the past 12 months.	`anydigpayment = 0`	Account holders only	lower
Has an account	Account at a bank or similar financial institution, or a mobile money account.	`account = 1`	All adults 15+	higher
Has a mobile money account	Personally uses a mobile money service to send, receive or store money.	`account_mob = 1`	All adults 15+ (not asked in Mauritania)	higher
Made or received a digital payment	Any digital payment in the past 12 months: wages, transfers, bills, purchases, remittances.	`anydigpayment = 1`	All adults 15+	higher
Paid a merchant digitally	Used a card, phone or the internet to pay in a shop or online.	`merchantpay_dig = 1`	All adults 15+	higher
Owns a mobile phone	Has a mobile phone used for personal calls.	`con1 = 1`	Adults who answered yes or no	higher
Owns a smartphone	Owns a phone, and the main phone is a smartphone.	`con1 = 1 and con9 = 1`	Adults who answered both questions	higher
Used the internet	Used the internet in the past three months.	`internet_use = 1`	All adults 15+	higher
Owns a phone, no account	Has a mobile phone but no account of any kind.	`con1 = 1 and account = 0`	Adults who answered the phone question	lower

Method and limits

Validation. Ethiopia's figures match the published Findex 2025 values: account ownership 48.8%, mobile money 9.5%, digital payments 20.7%. The same code produces every country.

Limits. One survey round, about 1,000 adults per country. Mauritania was not asked about mobile money. These are shares of adults, not counts of accounts; Ethiopia's 135 million-plus wallets are accounts, many of them unused or held by the same person.

Country figures use each country's survey weight. **The regional figure** rescales each country's weights to its adult population, so large countries count more, as they should for a "share of African adults" figure.

Margins are approximate 95% intervals from the effective sample size of the weights. Clustering isn't in the public file, so true margins are wider. Countries a few points apart are often not different.
